Get certified and demonstrate your expertise?
Dell Technologies Proven Professional is a leading certification program in the IT industry, providing comprehensive coverage of information technologies, virtualization, cloud computing, data science, Big Data analytics and more.
Modernizing IT infrastructure requires broad understanding of computing, network, storage, applications, and more. From Associate-level to Master, our courses and learning paths will help you gain the knowledge and skills to modernize, automate, and transform your IT organization.

**EXAMPLE COURSES AND USE CASES**

**Information Storage and Management v4**
ISMv4 provides comprehensive understanding of storage infrastructure components in modern data center environments. It prepares participants to make informed decisions on storage-related technologies and further specialties among components. The breadth of this course sets an ideal educational baseline for a career in the enterprise storage industry.

**Cloud Infrastructure and Services v3**
This “cloud essentials” course explains the technologies, processes, and mechanisms required to build a cloud infrastructure. CISv3 takes an open approach and uses the Cloud Reference Architecture to describe cloud computing concepts and technologies.

**Data Protection and Management**
The DPM course provides comprehensive understanding of various data protection and availability solutions for traditional and modern data centers. Learn cloud-based data protection techniques, SDDC-specific data protection, and solutions for protecting Big Data and mobile device data. The critical areas of data security and data protection management are also covered.

**Introduction to Data Engineering**
Data Engineers design, manage, analyze, and optimize data within an organization, one of the most important and in-demand jobs across a wide range of industries. Data Engineers need advanced programming skills and an understanding of data management systems and data pipelines. Our courses will challenge you in all areas, from data analytics to data preparation for end-users.
